CONTRACT VALUE: \$4.6 Million

Design Assist: YES

Preconstruction Assistance: YES

START DATE: December 2012

COMPLETION DATE: August 2013

The James Cancer Hospital and Solove Research Institute at The Ohio State University's Wexner Medical Center is a 21-story \$1.2 Billion cancer and critical care tower in Columbus, Ohio. Pivotek partnered with Turner Construction to manufacture 313 bathrooms in 12 different configurations for this massive project.

Turner Construction chose Pivotek prefabricated bathrooms systems as a solution to meeting the project's aggressive deadlines and high quality standards demanded by the healthcare industry. Early collaboration with the project architect-HOK and Turner Construction proved extremely beneficial throughout the design phase and was an integral strategy to ensuring accurate communication with onsite contractors. Predictability, cost certainty, quality control/assurance, and schedule optimization were all benefits delivered through the use of prefabricated bathroom systems for this project.
